

Wemen Sun Farm

Hatta-Robinvale Road
Wemen, Victoria 3549
Australia

Overland Sun Farming has joined with the UK-based solar energy group, Island Green Power, to develop three large solar projects south-east of Mildura in north-west Victoria. The combined capacity of the three solar farms will be 320 MW. The planned Wemen Sun Farm will have a capacity of 109MW. The other solar farms in the group are the Yatpool and the Karodoc Sun Farms. Powercor Australia has signed agreements to connect each of the projects to the State electrical grid. Construction was planned to start during 2017 and is expected to take about 12 months. In December 2017, the Clean Energy Finance Corporation announced that it would provide \$110 million in debt financing for the project. Installation commenced in June 2018. The solar farm is expected to be fully operational by December 2019.

Company: Overland Sun Farming

Capacity (MW): 320

Status: Under Construction

Start Year: 2018

Technology: Photovoltaic

Fuel: Solar
